Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents users or external systems that provide or receive data, such as Residents, Disaster Management Authorities, Weather API, and River Water Level Sensors.
Rectangle with numbered header	Process	Represents system operations like collecting weather data, preprocessing data, running the AI/ML prediction model, calculating flood risk, and sending alerts.
Rectangle (solid fill, no number)	Data Store	Stores information such as historical flood records, weather datasets, trained AI/ML models, and flood prediction results for future analysis.
Labeled arrow	Data Flow	Shows the movement of data between users, external systems, processes, and databases, including weather data, river levels, prediction results, and alert notifications.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
