

Project Executable Files

Date	29 June 2026
Team ID	N/A
Project Name	Rising Waters
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	No

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

The screenshot shows a GitHub repository interface. The repository is named 'venkatvenkat34567-eng / Rising-Waters-Project' and is public. The main branch is 'main'. The repository has 1 branch and 0 tags. The file and folder structure is as follows:

File/Folder	Description	Last Commit
dataset	Add dataset	3 days ago
models	Add trained model	3 days ago
static	Add static files	2 days ago
templates	Add HTML templates	2 days ago
test	Add test scripts	2 days ago
.gitignore	Initial commit	4 days ago
app.py	Update app.py	2 days ago
README.md	Update README.md	2 days ago
requirements.txt	Add requirements	3 days ago
train_model.py	Add training script	3 days ago

The repository also includes a README file, which is currently selected. The right sidebar shows the repository's 'About' section, which describes it as a 'Rising Waters: Flood Prediction System' using 'machine-learning', 'flask', and 'flood-prediction' for 'environmental-monitoring'. It also shows the repository's statistics: 0 stars, 0 watching, and 0 forks. The 'Releases' section indicates that no releases have been published. The 'Packages' section indicates that no packages have been published. The 'Languages' section shows the following language distribution: Python 86.4%, HTML 9.1%, CSS 2.7%, and JavaScript 1.8%.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed (Runs locally)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Localhost (Flask Development Server)
Repository Link	https://github.com/venkatvenkat34567-eng/Rising-Waters-Project-.git
Demo Video Link	https://drive.google.com/file/d/10CGaawayHgsAZZmCE6FNYb68zt_Auud2/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install **Python 3.10 or later**.
2. Open the project folder in VS Code or Command Prompt.
3. Install dependencies using:
 `pip install -r requirements.txt`
4. Start the application:
5. `python app.py`
6. Open the browser and visit:
7. <http://127.0.0.1:5000>
8. Enter rainfall, water level, humidity, temperature, wind speed, and soil moisture values.
9. Click **Predict Flood Risk** to view the prediction.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No real-time weather data integration	Future enhancement
2	IoT sensor integration not implemented	Planned for future versions
3	Application is currently deployed only on localhost	Can be deployed to Render, Railway, or AWS later
