

Demonstration of Proposed Features

Date	01 July 2026
Team ID	N/A
Project Name	Rising Waters – Flood Prediction
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document presents the key features proposed for the **Rising Waters – Flood Prediction** system and records their implementation status. It demonstrates that the developed application successfully integrates machine learning and web technologies to provide accurate flood prediction and early warning support.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrate d (Yes / No)	Remarks
1	Flood Prediction	Predicts whether a flood is likely to occur using environmental and hydrological parameters.	Implented	Yes	Successfully demonstrated with multiple test cases.
2	Real-Time Data Input	Allows users to enter rainfall, river level, temperature, humidity, soil moisture, wind speed, and water flow rate.	Implemented	Yes	Input validation working correctly.
3	Machine Learning Prediction	Uses a trained Random Forest model to generate accurate flood predictions.	Implemented	Yes	High prediction accuracy achieved.
4	Early Warning Alert	Displays Flood Detected or No Flood along with the corresponding risk level.	Implemented	Yes	Early warning messages generated successfully.
5	Flask Web Application	Provides a responsive web interface connecting the frontend with the machine learning backend.	Implemented	Yes	Web application functioning smoothly.
6	Prediction Results Dashboard	Displays prediction results and flood risk information in a user-friendly format.	Implemented	Yes	Results displayed successfully after prediction.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6

Total Features Demonstrated	6
Overall Implementation Rate (%)	100
